Project 3

### **The Surf Report**

The Surf Report is a project I created that uses the data that comes out of Surfline to make an interface that allows users to check information such as high tide or low tide, height of waves, temperature of water, swell, and more, at the beaches near their location. It will be used to check surf and beach conditions and whether or not it is worth it to make the journey over to the ocean. It is a fun experience that plays surf-culture music and has fun graphics to show if the surf is good enough or not.

This would be used in an application on both the phone or computer; It is an easier way to see surf conditions versus going onto the website and having to go through a series of tasks to get to the page where you can check the conditions. I hope to engage viewers through the aesthetics of my project.

My targeted audience would be those who go to the beach to surf or do other activities such as walking, or hanging out. This is an interactive piece that also allows viewers to access the beach camera so they can see for themselves what it is like.
